

TEOCO AND DATALLEGRO ANNOUNCE NEW PARTNERSHIP

March 21, 2005 – FAIRFAX, VA – TEOCO Corporation, the leading provider of cost and revenue management solutions to communications and entertainment companies, announced today that they have signed a partnership agreement with and become a customer of DATAlegro™, supplier of data warehouse appliances that lead the industry in price and performance. TEOCO's new Sonar analytics solution will utilize DATAlegro's "C" series (high capacity) data warehouse appliances to store and manage terabytes of usage, call detail record (CDR) and fraud information for TEOCO's customers.

Wireline, wireless and cable communication companies recognize the untapped savings potential offered by auditing and analyzing usage, CDR and fraud information. However, the sheer volume of data available makes meaningful analysis difficult. High-volume data warehousing and high-speed query processing are required to take full advantage of this rich opportunity.

"While most communications and entertainment companies have processes in place to review and audit their relatively stable facility-based charges, they are lacking ability to analyze their usage and CDR information," said John Devolites, General Manager of TEOCO's Communications & Entertainment Solutions group. "We evaluated a number of other companies in the high capacity data warehouse arena, but chose to partner with DATAlegro because they offered the most compelling combination of price, high capacity and high performance."

"We are pleased that TEOCO has selected DATAlegro data warehouse appliances as the foundation for their Sonar solution," said DATAlegro CEO, Stuart Frost. "Together, we can enable companies to more affordably audit and analysis usage, CDR and fraud information on larger volumes of data than ever before."

TEOCO's Sonar solution is an innovative technical approach that features a high capacity data warehouse appliance utilizing a massively parallel processing architecture. Users are able to store and access large volumes of data at an affordable price. Key features include: up to 100 times query performance gains over traditional solutions, 500 gigabyte/min table scans and 360 gigabyte/hour data load.

TEOCO is launching their Sonar analytics solution at the TelecomNEXT conference in Las Vegas, NV. TEOCO will be exhibiting in booth #617 at TelecomNEXT on March 21-22, 2006.

ABOUT TEOCO

Founded in 1994 TEOCO (The Employee Owned Company) is a leading provider of strategic business solutions to large and small enterprises. Twice ranked in Inc.
