

## **PRE-RELEASE ANNOUNCEMENT**

On June 1, 2007 TEOCO, the recognized leading provider of network cost, revenue management and business intelligence services, will release XTrak-CABS for production use. This release will provide those communications service providers with proprietary or other third-party CABS-friendly systems the ability to take advantage of TEOCO's XTrak invoice automation solution and its patent-pending technologies.

### **Why XTrak?**

XTrak eliminates the tedious, costly and error-prone task of manual data entry. The XTrak technology "mines" the electronic formats which produced the paper to create CABS files for system processing. XTrak's data mining technology is far superior to "scanning" solutions, which are hindered by the inherent limitations of optical character recognition (OCR) technologies. As a result, XTrak is the only solution guaranteed to provide a 100% accurate representation of what is contained on paper bills. TEOCO has over 2,500 formats in production for over 700 vendors. Our process is SAS 70 certified to help support your Sarbanes-Oxley requirements.

### **Why CABS?**

CABS is the North American standard for carrier-to-carrier billing and is the only industry-standard format that provides the detailed invoice information required to maximize audit savings. Other industry standard formats, such as EDI and SECAB, are not designed to support all types of carrier-to-carrier invoices at a

detailed level. Only TEOCO's proprietary XTrak Information Format (XIF) and the industry-standard CABS format ensure that you will have complete information to approve or dispute other carriers' invoice at a detailed level.

### **How easy is it?**

Your vendors send their paper invoices or non-standard electronic files to TEOCO and you receive a CABS electronic file back within the contracted timeframe (usually within 3 business days). The original paper invoices are available for your review on our web-based XTrak portal. We take care of working with the vendors to utilize their non-standard electronic files.

### **Why TEOCO?**

TEOCO is the recognized industry leader in carrier invoice automation. Our products and services are specific to the communications and entertainment industry. We take pride in producing software that materially saves money for our clients and improves their bottom line. Our customers include three of the top five global communications providers, all Tier 1 U.S. carriers and most major North American cable operators.

### **FAQS**

#### Is any of your work done outside the US?

*All of our transaction processing, ASP operations, outsourcing, software development and XTrak operations are done in the U.S. to safeguard your*

*sensitive facility, inventory, carrier rates and usage information. Only with your explicit, written approval will TEOCO use our off-shore capabilities for manual entry.*

Do you have clients who have tried “scanning” with other vendors?

*Yes, and we are proud to say they are our best customers today -- because they truly appreciate the increased level of detail that they now receive with 100% accuracy. Our XTrak customers find that rejected invoices, erroneous error messages, late payment charges, and wasting time on false disputes are a thing of the past.*
