

TEOCO SmartOps®

NETWORK ENGINEERING AND PROVISIONING

RAPIDLY DEPLOY NEW SERVICES AND TECHNOLOGIES

OPERATIONAL OVERSIGHT AND CONTROL OF TRANSPORT NETWORK SERVICES - FROM PLANNING TO DELIVERY

As Communication Service Providers (CSPs) accelerate technology deployments and consolidate networks, the demand for greater bandwidth and operational efficiency continues to grow. Yet fragmented internal processes often hinder these strategic initiatives, driving up costs, eroding margins, and limiting the agility needed to deliver exceptional customer experiences.

SPEED AND GROWTH OF NEW SERVICES DEPEND ON AN EFFICIENT DEPLOYMENT MODEL BUILT ON RELIABLE DATA AND OPERATIONAL EXCELLENCE.

Many CSP operations rely on disjointed systems and manual workflows that limit visibility across planning, implementation and decommissioning activities. The result is siloed operations, missed dependencies and delayed service rollouts.

TEOCO SmartOps™ brings order to this complexity by unifying processes across the entire transport network lifecycle. From planning and design to integration, optimization and decommissioning, SmartOps provides the structure, data accuracy and automation needed to accelerate service delivery, control costs and strengthen customer satisfaction. With SmartOps, CSPs can deploy new technologies faster, optimize existing networks, and manage transformation with ease.

SmartOps Benefits

- Deep telecom expertise supporting transport engineering and technical support operations.
- Scalable expert resources to support periods of rapid growth and specialized projects.
- Secure, collaborative platform enabling multi-team access and real-time project insight.
- Professional project management delivers on-time, on-budget results with intelligent visibility into key metrics.
- End-to-end transport lifecycle management from planning to test and turn-up.

TEOCO SmartOps

SmartOps™ unifies planning, implementation, analytics, optimization, and reporting into a single platform for managing transport networks. It streamlines the full engineering lifecycle for CSPs—from design and ordering to deployment, SLA management, and performance insight. Backed by TEOCO's telecom expertise and secure cloud platform, SmartOps boosts data accuracy, speeds service delivery, increases profitability, and provides end-to-end visibility across projects and assets.

PLAN

Plan, design, and optimize fixed and message networks across multiple technologies. One stop shop to streamline RFP management, contract negotiation, network planning, routing, and financial analysis.

IMPLEMENT

Accelerate deployments with expert ordering of CSP work orders, ASRs/LSRs, and inventory. Keep projects on track via documentation, proactive oversight, and seamless testing and activation.

ANALYZE

Unlock actionable insights on projects, networks, and finances for smarter decisions. Track performance, capacity, SLAs, numbering, and costs to align growth with standards and commitments.

OPTIMIZE

Drive efficiency with analytics for network growth, M&A integration, decommissioning, and targeted projects—delivering peak performance and cost savings.

VISUALIZE (REPORTING & DASHBOARDS)

Turn data into real-time intelligence via dashboards. Monitor circuits, numbering, orders, and workflows, integrating with TEOCO SmartHub for full lifecycle visibility.

FOR MORE INFORMATION

For over 30 years, TEOCO has helped CSPs run profitable businesses. Contact us today to schedule a meeting and experience firsthand how TEOCO SmartOps can help improve margins, cut costs and optimize your telco business.
